

Searching Stations?

- * I tried to build both my PHP and Python Indego API libraries identically. They accept a single search parameter:
 - * No search parameter? Return all stations
 - * Digits as search parameter?
 - * Four (4) digits? Station with that unique "kioskId"
 - * Five (5) digits? Stations with that zip/postal code
 - * Any other search parameter? Regular expression match on:
 - * Station name
 - * Address

Graphing Stations (Part 1)

- * This was my first attempt at using the API
- * It is a basic website with a table of colorful blocks showing bicycles and empty docks at each station

3005	Welcome Park, NPS	8	
3006	40th & Spruce	10	
3007	11th & Pine, Kahn Park	5	
3008	Temple University Station	3	
3009	33rd & Market	6	
3010	15th & Spruce	14	
3011	38th & Powelton	8	
3012	21st & Catharine	2
